## Experience

### Microsoft

*Software Engineer | Azure Storage, SKU Validation | August 2023 - August 2025*

- Architected and built a full-stack web application ("SKULens") through an **Azure Durable Functions Python** API and a **Typescript React** frontend to replace legacy Python scripts and display comparative metrics, charts, and reports related to datacenter hardware testing.
- Led development on SKULens and onboarded five contributors onto the project, delegating and prioritizing tasks based on feature requests from leadership and users.
- Reduced time to sign-off by approximately three weeks for a multiple months-long sign-off process on new datacenter hardware by simplifying performance analysis and review.
- Overhauled single-threaded execution of hundreds of Kusto queries by implementing a parallelized dependency graph system with a **Redis** caching layer and automatically scaling server resources.
- Owned the sign-off process for five Azure Premium SSD SKUs, collaborating with storage teams globally to coordinate load-testing, debugging, power testing, report creation, and performance review.
- Redesigned schemas and migrated previously unstructured performance data from Azure Kusto to Azure **SQL Server** to standardize data relationships and reduce manual error.

### Microsoft

*Software Engineering Intern | Azure Storage, XStream | June 2022 - September 2022*

- Developed highly customizable charting interfaces using **Typescript React** and **Ant Design** Charts to enable storage engineers to view trends and anomalies in logging metrics at a glance.
- Resolved chart rendering performance bottlenecks in the Electron desktop application through **Redux** state management and client-side data aggregation.

### Brown University

*Undergraduate Teaching Assistant | cs0111 Computing Foundations: Data | September 2021 - December 2022*

- Created weekly labs and held office hours for 200+ undergraduates in individual and small group settings.
- Contributed to frontend design of course websites each semester using **HTML** / **CSS** / **Javascript**, including Windows-style draggable containers and styling for course content in the Spring 2022 semester.

### Brown University Center for Computation and Visualization

*User Services Intern | February 2021 - August 2021*

- Developed a **Python Selenium** automation script that reduced account setup time by 60% by automating account privilege assignment across multiple web interfaces.
- Serviced over 100 tickets for creating user accounts, accessing software, and updating privileges in Linux.

## Education

### Brown University

*Class of 2023 | A.B. Computer Science, A.I. Pathway*

## Projects

### JournalTexter

*Java, React.js, SQLite, Apache Spark | [repo]*

- Contributed to full-stack development of **React** journaling app with a **Java** backend, featuring question-based writing prompts pulled from a custom-built **SQLite** database.

## Skills & Interests

**Programming** *Typescript, React, Javascript, Python, numpy, Java, SQL, Django, C, C++, Apache Spark*

**Tools** *Figma, Github Copilot, Adobe Suite (Photoshop, Illustrator, Indesign), Azure Devops*

**Cloud** *Azure Static Web Apps, Azure Functions, Azure Kusto, Azure Cosmos DB, Docker*

**Interests** *Calisthenics, Wrestling, Freestyle Dance, Brazilian Jiu-Jitsu, Aerial Acrobatics, Gaming*
