Experience

Microsoft

Software Engineer, Azure Storage | Aug 2023 - Aug 2025 | Redmond, WA

- Led development of SKULens, a full-stack web application (React/Typescript & Azure Durable Functions) that served as a central platform for new datacenter hardware metrics, charts, and reports.
- Modernized a legacy Python script into a parallelized dependency graph system with Redis caching and auto-scaling serverless resources, replacing slow single-threaded execution of hundreds of Kusto queries.
- Reduced new hardware sign-off time by approximately three weeks by simplifying the performance analysis process with the SKULens dashboard, accelerating time-to-market for Azure Premium SSD SKUs.
- Owned the end-to-end hardware sign-off process for five Azure Premium SSD SKUs, collaborating with global storage teams to coordinate load-testing, debugging, power testing, and performance review.
- Redesigned data schemas and migrated unstructured performance data from Azure Kusto to Azure SQL Server to standardize data relationships, improve query performance, and reduce manual error.
- Onboarded five contributors to SKULens and directed them at various stages of the project, delegating tasks and prioritizing features based on feedback from leadership and users.

Microsoft

Software Engineering Intern, Azure Storage | Jun 2022 - Sep 2022 | Remote

- Developed highly customizable charting interfaces using Typescript React and Ant Design Charts to enable storage engineers to view trends and anomalies in logging metrics at a glance.
- Resolved chart rendering performance bottlenecks in the Electron desktop application through Redux state management and client-side data aggregation.

Brown University

Undergraduate Teaching Assistant, cs0111 Computing Foundations | Sep 2021 - Dec 2022 | Providence, RI

- Created weekly labs and held office hours for a course of 200+ students in individual and small group settings.
- Contributed to frontend design of course websites each semester using HTML / CSS / Javascript, including Windows-style draggable containers and styling for course content in the Spring 2022 semester.

Brown University Center for Computation and Visualization

User Services Intern | Feb 2021 - Aug 2021 | Remote

- Developed a Python Selenium automation script that reduced account setup time by 60% by automating account privilege assignment across multiple web interfaces.

Education

Brown University

Class of 2023 | A.B. Computer Science, AI Pathway

Projects

DefendHell.io

Typescript, Express.js, Node.js, Websockets, HTML Canvas

- Building a real-time multiplayer browser game with server-authoritative game logic in TypeScript/Express, using WebSockets for low-latency state synchronization between clients.

Skills

- **Programming Languages:** Typescript, Python, JavaScript, Java, Ruby, C++
- **Frameworks & Libraries:** React, Redux, Selenium, Redis, Express, Node, Apache Spark,
- **Cloud, Data & DevOps:** Microsoft Azure, Azure Durable Functions, SQL, NoSQL, Azure DevOps, Docker
- **Design & Productivity:** Figma, GitHub Copilot, Claude Code, Adobe Suite
- **Interests:** Calisthenics, Wrestling, Freestyle Dance, Gaming, Brazilian Jiu-Jitsu, Aerial Acrobatics, Climbing
