## Experience

---

### Microsoft

*Software Engineer, Azure Storage | Aug 2023 - Aug 2025 | Redmond, WA*

- Architected and built a full-stack web application ("SKULens") through an **Azure Durable Functions Python** API and a **Typescript React** frontend to replace legacy Python scripts and display comparative metrics, charts, and reports related to datacenter hardware testing.
- Led development on SKULens and onboarded five contributors onto the project, delegating and prioritizing tasks based on feature requests from leadership and users.
- Reduced time to sign-off by approximately three weeks for a multiple months-long sign-off process on new datacenter hardware by simplifying performance analysis and review.
- Overhauled single-threaded execution of hundreds of Kusto queries by implementing a parallelized dependency graph system with a **Redis** caching layer and automatically scaling server resources.
- Owned the sign-off process for five Azure Premium SSD SKUs, collaborating with storage teams globally to coordinate load-testing, debugging, power testing, report creation, and performance review.
- Redesigned schemas and migrated previously unstructured performance data from Azure Kusto to Azure **SQL Server** to standardize data relationships and reduce manual error.

### Microsoft

*Software Engineering Intern, Azure Storage | Jun 2022 - Sep 2022 | Remote*

- Developed highly customizable charting interfaces using **Typescript React** and Ant Design Charts to enable storage engineers to view trends and anomalies in logging metrics at a glance.
- Resolved chart rendering performance bottlenecks in the Electron desktop application through **Redux** state management and client-side data aggregation.

### Brown University

*Undergraduate Teaching Assistant, cs0111 Computing Foundations | Sep 2021 - Dec 2022 | Providence, RI*

- Created weekly labs and held office hours for a course of 200+ undergraduates in individual and small group settings.
- Contributed to frontend design of course websites each semester using **HTML / CSS / Javascript**, including Windows-style draggable containers and styling for course content in the Spring 2022 semester.

### Brown University Center for Computation and Visualization

*User Services Intern | Feb 2021 - Aug 2021 | Remote*

- Developed a Python **Selenium** automation script that reduced account setup time by 60% by automating account privilege assignment across multiple web interfaces.
- Serviced over 100 tickets for creating user accounts, accessing software, and updating privileges in Linux.

## Education

---

### Brown University

*Class of 2023 | A.B. Computer Science, AI Pathway*

## Projects

---

### JournalTexter

*Java, React.js, SQLite, Apache Spark, HTML, CSS*

- Designed and implemented interactions with **SQLite** database and contributed to full stack development of a journaling web app that prompted users with questions. Built in **React** and **Java**.

## Skills & Interests

- **Programming:** Typescript, React, Javascript, Python, Redux, SQL, NoSQL, Redis, Java, Django, C++, Ruby, Spark
- **Tools:** Figma, Github Copilot, Claude Code, Adobe Suite, Azure Devops
- **Cloud:** Microsoft Azure, Docker
- **Interests:** Calisthenics, Wrestling, Freestyle Dance, Gaming, Brazilian Jiu-Jitsu, Aerial Acrobatics, Climbing
